Brief portfolio Cyril ETIEVANT

For this project we have 3 differents views. One for application, another for mobile and the last is for browser. Some items need animation or special effect.

- <u>For application</u> :

At launch, the screen is like freeze with some word on. « Together break ice ». User need tap 3 time on screen. At each tap the freeze break a little. At 3 times, all is break and we are on the about me page.

In the application, i want 3 pages. User can change with slide on left or right.

Dont forget a special mention for Emmanuel Guillou for inspirate me for first effect in about me page.

- <u>For the browser view</u> :

The punch line need emerge like she was diggit on a keyboard.

If the visitor clik on the button « Look my Job » he goes automaticaly at the portfolio section.

 The link on navigation bar go too the section who have the same name. If visitor scroll down navigation bar stay the top of the screen and stay visible. When the screen is on the appropriate section, the link in the nav bar have a hover effect.

With this effect, no section name are needed on the main page, visitor always know where is he.

At the middle of the nav bar we have a image. I 'm still looking for what i want in this place.

All section appear when the are visible on the screen. For the first, i need a simple emerge. For portfolio section, each div need come by their respective sides. The left come by left, right by right and middle by the down and only when visitor can see the effect.

For each item in portfolio section, we have the title of the project, one categorie (ex : Blog , Javascript etc…) all on the screen capture of the final visual. For hover effect, more text appear by different way. Project description is needed here.

In the contact section. At the begining a select with 2 choice. When one is select, a special div appear with the content who can read on the wireframe.

- <u>For the mobile view</u> :

The navigation bar become a collapse menu. On the top of each section we have one button. On the clik, we go at the top of the page. A hover effect is needed for this.
